

# Stat 346 Homework 2

Nathan Jarus

Feb. 13, 2014

## 1 Problem 1

### 1.1 Part a

The residuals are not normally distributed, indicating a nonlinear relationship. Possible fixes include non-linear regression or a transformation on  $X$ .

### 1.2 Part b

These residuals seem to be normally distributed with constant variance. This indicates that the model is a good fit.

### 1.3 Part c

The errors are not normally distributed. This might be fixed with a transformation on  $Y$ .

### 1.4 Part d

The variance on the residuals is not constant. This might be fixed with a transformation on  $Y$ .

2 Problem 2

2.1 Part a

00:27 Thursday, February 20, 2014 1

Plastic Hardness  
Residuals vs. time

Plastic Hardness  
Normal Probability

00:27 Thursday, February 20, 2014 1

The residuals seem normally distributed and support a linear trend.

## 2.2 Part b

$$s\{b_1\} = 2.125 \times 10^{-2} t(1 - 0.05/2, 16 - 2) = t(0.975, 14) = 2.145 \quad b_1 = 0.47833 \pm 2.145 * 2.125 \times 10^{-2} \\ (0.43275, 0.52392)$$

## 2.3 Part c

$$\hat{Y} = 37.7759 \quad s\{\hat{Y}\} = 0.5851 \quad \hat{Y} \pm t(1 - 0.05/2, 16 - 2) s\{\hat{Y}\} = 2.145 * 0.5851 \quad (36.5209, 39.0309)$$

## 2.4 Part d

$$R^2 = 1 - \frac{SSE}{SSTO} = 1 - \frac{34.342802}{1280} = 0.9731$$

## 2.5 Part e

1. General Linear Test
2. ANOVA
3. T-test

## 3 Problem 3

### 3.1 Part a

	ORIGINAL REGRESSION	REGRESSION WITH OUTLIER
Fitted Regression Equation	$\hat{Y} = 2.11405 + 0.03883X$	$\hat{Y} = 3.04977 + 0.00090502X$
R-Square	0.0726	0.0011
MSE	0.38829	0.41822
$SE\{b_1\}$	0.01277	0.00250
P-Value	0.0029	0.7178

3.2 Part b

01:31 Thursday, February 20, 2014 1

GPA and ACT  
Residuals vs. time

01:31 Thursday, February 20, 2014 1

GPA and ACT with typo  
Residuals vs. time

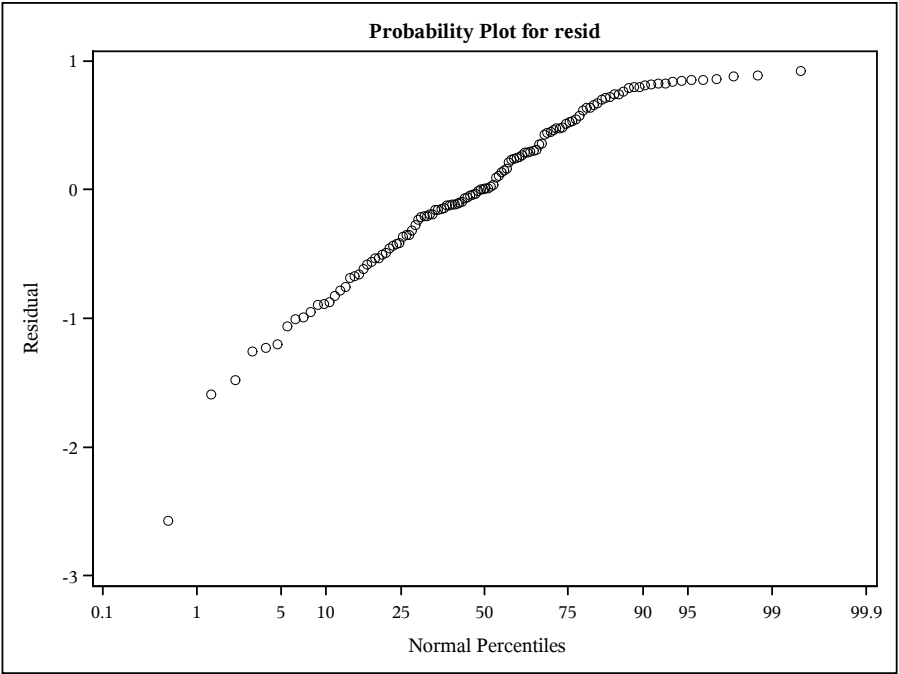

*GPA and ACT*  
*Normal Probability*

01:31 Thursday, February 20, 2014 1

*GPA and ACT with typo*  
*Normal Probability*

01:31 Thursday, February 20, 2014 1

The residuals plot is much more extreme.

### 3.3 Part c

Yes, you could construct a sequence diagram over the dates, or perhaps school years, at which the GPA and ACT scores were collected.

## 4 Problem 4

## 5 Problem 5, KNN #3.23

Full Model:

$$Y_{ij} = \mu_j + \epsilon_{ij} \quad (1)$$

Degrees of freedom:  $n - c$

Reduced Model:

$$Y_{ij} = \beta_1 X_j + \epsilon_{ij} \quad (2)$$

Degrees of freedom:  $n - 2$
